-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 February 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ 6) ☐ Other: _____

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Waller, Jr. et al (US 6,383,612) in view of Mrozinski (US 5,120,594) and Topolkaraev et al (5,968,643). Waller teaches an inkjet receptor comprising a microporous membrane impregnated with a silicone based surfactant (column 4, lines 29-36). Waller uses the microporous membrane disclosed in Mronzinski (US 5,120,594) (column 4, line 63). Mronzinski teaches a microporous film made of biaxially oriented high density polyethylene (table 2, example 4). It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ high density polyethylene as the microporous membrane because of its readily availability and economic advantage. Waller is silent as to the silicone glycol surfactant. Topolkaraev discloses a list of surfactants including a silicone glycol copolymer (column 8, lines 22-25). It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a silicone glycol copolymer as the surfactant because of its readily availability.
- With regard to claim 3, Mronzinski teaches the microporous membrane comprising the tallow amine as a cavitating agent (column 7, line 3). It would have been obvious

Art Unit: 1771

to one having ordinary skill in the art at the time the invention was made to employ a cavitating agent motivated by the desire to create the pores within the membrane.

3. Claims 5, 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Waller, Jr. et al (US 6,383,612) in view of Mrozinski (US 5,120,594) and Topolkaraev et al (5,968,643) as applied to claim 1, further in view of Emslander et al (US 5,721,086). The combination of Waller, Mrozinski and Topolkaraev fails to teach or suggest the additional layer applied to the porous membrane. Emslander teaches the image receptor medium including an inkjet layer (column 3, lines 17-19, figures 1-3). It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the inkjet layer into the image receptor medium motivated by the desire to promote the receptivity of inkjet inks on the image receptor medium.
4. Claims 1-4, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Waller, Jr. et al (US 6,383,612) in view of Anderson et al (US 5,326,391) and Topolkaraev et al (5,968,643). Waller teaches an inkjet receptor comprising a microporous membrane impregnated with a silicone based surfactant (column 4, lines 29-36). Waller is silent as to high density polyethylene microporous membrane. Anderson teaches a microporous film made of biaxially oriented high density polyethylene and comprising calcium carbonate as a cavitating agent (table 2, column 6, line 52). It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ high density polyethylene as the microporous membrane because of its readily availability and economic advantage.

Art Unit: 1771

It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ calcium carbonate as the cavitating agent motivated by the desire to create the pores within the membrane upon the film stretching. Waller is silent as to the silicone glycol surfactant. Topolkaraev discloses a list of surfactants including a silicone glycol copolymer (column 8, lines 22-25). It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a silicone glycol copolymer as the surfactant because of its readily availability.

5. Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Waller, Jr. et al (US 6,383,612) in view of Anderson et al (US 5,326,391), Topolkaraev et al (5,968,643) as applied to claim 1, further in view of Emslander et al (US 5,721,086). The combination of Waller, Anderson and Topolkaraev fails to teach or suggest the additional layer applied to the porous membrane. Emslander teaches the image receptor medium including an inkjet layer (column 3, lines 17-19, figures 1-3). It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the inkjet layer into the image receptor medium motivated by the desire to promote the receptivity of inkjet inks on the image receptor medium.

Withdrawal of Finality

6. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.
7. The art rejections in Paper no. 10 have been overcome by the present response.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai Vo whose telephone number is (703) 605-4426. The examiner can normally be reached on Tue-Fri, 8:30-6:00 and on alternating Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on (703) 308-2414. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Art Unit: 1771

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
